HIV 101

Without treatment, HIV (human immunodeficiency virus) can make a person very sick and even cause death. Learning the basics about HIV can keep you healthy and prevent transmission.

HIV CAN BE TRANSMITTED BY	HIV IS NOT TRANSMITTED BY
 Sexual Contact  Sharing Needles to Inject Drugs  During Pregnancy, Birth, or Breast/Chestfeeding	 Air or Water  Saliva, Sweat, Tears, or Closed-Mouth Kissing  Insects or Pets  Sharing Toilets, Food, or Drinks

PROTECT YOURSELF FROM HIV

- Get tested at least once or more often if you have certain risk factors.
- Use condoms the right way every time you have anal or vaginal sex.
- Choose activities with little to no risk like oral sex.
- Don't inject drugs, or if you do, don't share needles, syringes, or other drug injection equipment.
- If you engage in behaviors that may increase your chances of getting HIV, ask your health care provider if pre-exposure prophylaxis (PrEP) is right for you.
- If you think you've been exposed to HIV within the last 3 days, ask a health care provider about post-exposure prophylaxis (PEP) right away. PEP can prevent HIV, but it must be started within 72 hours.
- Get tested and treated for other STDs.

KEEP YOURSELF HEALTHY AND PROTECT OTHERS IF YOU HAVE HIV

- Find HIV care and stay in HIV care.
- Take your HIV treatment as prescribed.
- Get and keep an undetectable viral load. This is the best way to stay healthy and protect others.
- If you have an undetectable viral load, you will not transmit HIV through sex.
- If your viral load is not undetectable—or does not stay undetectable—you can still protect your partners by using other HIV prevention options.
- Learn more at www.cdc.gov/hiv/basics/livingwithhiv.

SELF-SCHEDULING IS HERE!

LEARN MORE ABOUT HOW YOU CAN SCHEDULE YOUR APPOINTMENTS!

THE FIRST WEEK IN DECEMBER IS NATIONAL INFLUENZA VACCINATION WEEK

According to the American Academy of Pediatrics, getting the flu vaccination can reduce the number of office visits, severity of illnesses, and missed school and work. Since flu activity is usually the highest between December and February, it is important to get your flu vaccine sooner than later.
